

CMIE Prowess_{dx}

Database Guide

Learning Centre
Indian Institute of Management Indore

Introduction

- Prowess_{dx} database is a web-based database accessible without any installation of the client application.
- It covers data for about 35,000 Indian companies, which includes listed companies, unlisted public companies and private companies of all sizes and ownership groups.
- It contains time-series data since 1990.

Instructions

- Users who are already registered on CMIE for any other product need not re-register. The registered ID would work for all CMIE databases subscribed to by IIM Indore.
- CMIE Products are:
 - a) CMIE Capex
 - b) CMIE Economic Outlook
 - c) CMIE Industry Outlook
 - d) CMIE Prowess Dx
 - e) CMIE Prowess IQ
 - f) CMIE states of India
 - g) Consumer Pyramid
- If you are residing outside the campus? Then Contact the library for access to an off-campus account for CMIE. library@iimidr.ac.in

Registration

- A single one-time registration works across all CMIE services.

Prowess_{dx}

Largest Database of Financial Performance of Indian Companies
Prowess Data extraction Interface for Academia.

[Home](#) | [FAQs](#) [in](#) [twitter](#)

Prowess_{dx} is specially designed for academia

Prowess is a database of the financial performance of companies. Annual Reports of companies, stock exchanges and regulators are the principal sources of the data. Prowess_{dx} is a delivery of the Prowess database that is specially designed for academia. Prowess_{dx} facilitates easy downloading of the data in simple text format.

The database covers the profit and loss statement, balance sheet and ratios based on these. In the case of listed companies it includes cash flow statement, quarterly financial statements, share prices, corporate action and daily total returns. Financial statements based on consolidated and standalone basis are available. Financial statements are standardised. The database does not suffer from any deliberate survival bias.

Prowess_{dx} delivers data for over 40,000 Indian companies. This includes listed companies, unlisted public companies and private companies of all sizes and ownership groups. It contains time-series data since 1990.

Steps to extract the data

CMIE

Prowess_{dx}

Largest Database of Financial Performance of Indian Companies

Prowess Data eXtraction Interface for Academia.

[Specifications & Requests](#) | [Limits](#) | [Prowess_{dx} Data Dictionary](#) | [Masters](#) | [Coverage of Companies](#) | [Research Papers](#) | [Announcements](#)

Subscription till: 06 Jan 2021

There are five steps to extract data from the Prowess database:

1. Select the database vintage. CMIE creates a database snapshot on 31 March, 30 September and 31 December of every year, beginning December 2013. Select any of these vintages.
2. Select the set of companies for which the data needs to be extracted.
CMIE creates several sets of companies and keeps them ready for use in extraction.
Users may optionally create their own sets and select these for data extraction, or they may use sets of companies made by others
3. Select indicators and the time-period.
4. Select output preferences such as format of date, currency and units, and extra description of the data being extracted.
5. Execute the extraction and save specifications used for the data extraction for possible future use.

Note:

Four of the five steps given above create a Specification. A Specification consists of choices regarding the database vintage, the set of companies, set of indicators and their time-range and formatting options. Specifications can be stored for future use. Saved Specification can be used at a future date to re-extract data with the same Specifications or they can be edited to create new Specifications that can be used for extraction of data.

Each saved Specification is assigned a unique Specification ID. When a Specification is used to extract data, a Request ID is created against the Specification. A Specification can be used multiple times to extract data. Every time data is extracted using the same Specification ID, a new Request ID is created. Thus, a request for data is uniquely identified by the combination of a Specification ID and a Request ID.

This system of Specification and Request IDs is useful in Replication. Prowess_{dx} supports replication.

Step 1 (Select Vintage) 2 (Company Set)

Step 1 of 5

Select the database vintage. CMIE creates a database snapshot on 31 March, 30 September and 31 December every year since December 2013. Select any one of these.

Select a database vintage to extract data from:

Mar 2020 ▼

next step ▶

Step 2 of 5

Select the set of companies for which the data needs to be extracted. CMIE creates several sets and keeps ready for use in extraction.

Users may create their own sets and select these, or they may upload and use those made by others. While uploading a user set or creating one, you need to specify the type of input used to specify companies. These could be the Prowess company code, BSE codes, NSE symbols or the government's CIN code.

☐ Select same companies as were selected earlier

Step 5 of 5

Execute the extraction and choose to save specifications for future use.

Enter description of data being extracted:

Your request for data extraction translates in to **1** Hit(s) ?

124 Companies and **5** Indicators

Save Specifications

Save Specifications and Extract Data

1. Requests for data extraction are taken up in sequence for processing in intervals of 5 minutes.
2. Processed requests will remain available for download for a maximum of 10 days.
3. The Request produces a .zip file, which when downloaded and unzipped results in two .txt pipe (|) delimited files. xxx_dat.txt contains the data and xxx_map.txt is a file that maps the column headers to names of the variables.
4. First line in each file contains column headers.
5. Each line (row) after the first contains the data.
