- Industrial Production Series
- Statistics of Mines
- Mineral Statistics
- Power Sector
- External Sector
- Monetary Statistics
- Finances of State Governments
- Combined Government Finances
- Health Statistics**
- Educational Statistics

Health Statistics

Description: Health module is presented in five major components namely, Demography, Health Status Indicators, Health Infrastructure, Human Resources in Health and Health Education Facilities. Data are culled out from two publications – National Health profile and Statistical Report of Sample Registration Survey (SRS). However, data on Health Finance are compiled from state finances published in RBI Bulletin. National Health Profile was earlier published as "Health Information of India" from 1986 to 2004 and as "Health Statistics of India" prior to 1986. As the publication has undergone changes over the period, the data provided has also changed over period. Hence, data series pertaining to some variables was discrete and inconsistent. Such variables are highlighted in the respective sections. While the National Health Profile is the major source of data, Statistical Report of SRS is primarily used for data on fertility and mortality indicators. SRS reports have been providing relatively consistent data over a period.

Sub- Modules

- Upon selection of a module, it provides description and the sub modules for further selection.

Footnote

Description

1954 to 2018 - State Figures will not add up to All India Total as data for states is as per reference year.
1958 to 1958 : Hospitals and Beds- Hospitals Include Hospitals and Sanatoria
1999 to 2001 : Hospitals and Beds- Rural/Urban distribution are not strictly comparable over years as standard classification procedures are not followed by States/Uts.
